

Logging Into NAS Systems for the First Time

When you obtain a NAS account, our support staff will guide you through some initial steps, which include choosing whether to use an RSA SecurID soft token (mobile app) or hard token (fob). The first time you log into NAS systems, you must enable the token, set up a personal identification number (PIN), and change your default NAS password.

To learn how to complete these steps and log into NAS systems for the first time, see the procedure that is appropriate for your token:

- [Enabling Your RSA SecurID Soft Token \(Mobile App\)](#)
- [Enabling Your RSA SecurID Hard Token \(Fob\)](#)
